## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to because Figs. 1 and 2 contain misspelled word; please change "SHITTER" in item 6 to "SHIFTER" in both Figs. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2819

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Kitao (U. S. PAT. 5,712,586).

In claim 1, Kitao teaches all claimed features in Fig. 3, a semiconductor integrated circuit device, comprising: an internal supply generating means (3) for generating, from an external supply voltage (2) that externally input, an internal supply voltage (operating voltage required to operate internal logic 6) at which a logic circuit (6) is operated; and a level shift means (7) for shift a voltage amplitude level of a signal input (14 or 27) to and output (15) from said logic circuit (6).

In claim 11, Kitao teaches all claimed features in Fig. 3, an electronic system comprising: a semiconductor integrated circuit device (22) including an internal supply voltage generating means (3) for generating, from external supply voltage (2) that externally input, an internal supply voltage at which a logic circuit (operating voltage required to operate internal logic 6) is operated; and an electronic component mounting board (inherent, the IC must be mounted on an electronic component mounting board such as pcb) for mounting said semiconductor integrated circuit device.

4. Claims 2-10, 12 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
